📌 About

I have been working in IT since 2016. At the beginning of my career, I tested web applications based on Oracle CRM at the consulting company Siblion. After getting my first experience as a tester, in 2018 I decided to try myself as a QA Engineer and got a job in the largest technology company Yandex on the Edadeal project as an engineer, where I am working at the moment.

At [Edadeal](#), I am responsible for the quality of key backend microservices and hybrid frontend webapps (embedded in native [iOS](#) and [android](#) apps).

I never stop and continuously learn new knowledge and technologies. I always apply the acquired skills in my work and daily life.

I aim to become an expert in the fast-growing field of QA. Always open to new challenges and career opportunities.

💻 Experience, 4+ years

QA Engineer

Yandex - <https://yandex.ru/company/>

02.2018 - till now
